

OLAYIWOLA MARIAM

FRONTEND DEVELOPER

maryham4real@gmail.com | [Github](#) | [Linkedin](#) | [Portfolio](#)

PROFESIONAL OVERVIEW

Frontend Developer with over two years of experience building responsive, user-focused web applications. Skilled in creating clean interfaces and interactive experiences using modern frontend technologies including React, React Router, Redux, Supabase, Tailwind CSS, Styled Components, and JavaScript. Passionate about writing maintainable code, improving user experience, and building performant web products across devices.

PROJECTS

Sweet Craving

LiveDemo: [Sweet Craving](#)

- Built a responsive dessert-themed web application using React for creating dynamic and interactive user interfaces.
- Implemented global state management with Redux to efficiently handle application data and user interactions.
- Integrated React Router for seamless client-side navigation across multiple pages without full page reloads.
- Styled the application using Tailwind CSS to achieve a modern, clean, and responsive design across devices.
- Structured the project using reusable and scalable components to enhance maintainability and performance.
- Deployed the application to showcase modern frontend development practices and optimized web performance.

React Quiz Application

Live Demo: [Quiz app](#)

- Built an interactive quiz application using React.
- Implemented state management using the useReducer hook to manage quiz logic and application state efficiently.
- Designed a clean and responsive user interface to ensure smooth experience across devices.
- Structured the application using reusable components for maintainability and scalability.
- Deployed the project to demonstrate modern React development practices.

Space Tourism Website

Live Demo: [space tourism](#)

- Built a fully interactive Space Tourism website using React, applying modern state management and component-based architecture.
- Utilized useReducer for managing complex UI state transitions, ensuring predictable and maintainable logic throughout the application.
- Implemented useContext to pass shared data (such as navigation state and selected content) across components without prop drilling.
- Designed a responsive and user-friendly interface that adapts seamlessly across mobile, tablet, and desktop viewports.
- Structured content into reusable, modular components to improve scalability and maintainability.
- Focused on performance best practices and efficient rendering by compartmentalizing state updates.
- Deployed the project using Vercel to demonstrate modern deployment practices for React applications.

Weather App

Live Deme: [weather website](#)

- Integrated the OpenWeather API to fetch and display real-time weather data using asynchronous JavaScript (Fetch API).
- Implemented dynamic DOM updates to display weather conditions based on user input.
- Added error handling for invalid city names and failed network requests.

- Deployed the application using GitHub Pages to demonstrate version control and deployment workflow.

AutoGlow Carwash

Live Demo: [AutoGlow car wash](#)

- Developed a responsive business website optimized for mobile, tablet, and desktop devices.
- Built an informative About section to clearly communicate the brand's vision and services.
- Maintained a consistent visual identity through typography, spacing, and color systems.
- Deployed via Netlify using version control workflow.

ADDITIONAL INFORMATION

- Technical skills: HTML, CSS, JavaScript (ES6+), React, Tailwind CSS.
- Soft skills: Problem Solving & Debugging, User-Centered Design Thinking, Attention to UI/UX Details, Continuous Learning & Improvement
- **Concepts & Tools** : Responsive Design, Component-Based Development, API Integration, State Management, DOM Manipulation, Git, Deployment
